

Green University of Bangladesh
Department of Computer Science and Engineering (CSE)
Faculty of Sciences and Engineering
Semester: (Winter, Year:2023), B.Sc. in CSE (Eve)

Course Title: Engineering Drawing
Course Code: CSE208 Section:EB

Lab Project Name: Basic House Floor Plan

Student Details

	Name	ID
1.	Md Azizul Hakim	223015007
2.	Md Ibrahim Hossain Sumon	223015011
3.	Akash	223015017

Submission Date :9-1-24 _____
Course Teacher's Name :Sumaiya Kabir _____

[For Teachers use only: **Don't Write Anything inside this box**]

Lab Project Status

Date:

Chapter 1

Introduction

1.1 Introduction

The Basic House Floor Plan project aims to introduce beginners to the fundamental concepts of architectural design using AutoCAD. The primary focus is on creating a simple and functional floor plan for a one-bedroom house. This project serves as an entry-level exercise to enhance participants' skills in drafting, designing, and understanding spatial arrangements.

1.2 Design Goals/Objective

The overarching objective of the project is to enable participants to:

1. Gain familiarity with AutoCAD interface and tools.
2. Understand the basics of architectural drafting, including drawing walls, doors, windows, and furniture.
3. Develop skills in creating accurate and scaled floor plans.
4. Apply design principles to organize and optimize space within a confined area.

Chapter 2

Implementation of the Project

2.1 Preliminary Steps:

Participants started by acquiring a basic understanding of the AutoCAD environment, including navigation, drawing tools, and layers. The project files were provided with the necessary templates and settings to facilitate the drafting process.

2.2 Drawing the Floor Plan:

The floor plan design involved creating rooms, defining walls, and placing doors and windows. Participants were encouraged to experiment with different room layouts and furniture arrangements. Basic design principles, such as considering traffic flow and functionality, were emphasized.

2.3 Dimensioning and Scaling:

Dimensioning was introduced to impart an understanding of measurements and scaling. Participants were guided on how to accurately represent dimensions within the drawing, ensuring that the floor plan reflected real-world proportions.

2.4 Furniture Layout:

Adding furniture to the floor plan allowed participants to explore the practical aspects of interior design. Guidelines on furniture placement and spacing were provided to create a balanced and aesthetically pleasing layout.

2.5 Annotations and Details:

Annotations, symbols, and additional details were incorporated to enhance the clarity and communicative value of the floor plan. Participants learned to use text, symbols, and other annotations to convey information effectively.

Chapter 3

Performance Evaluation

3.1 Project display

3.2

Figure 3.2: Elevation 1

3.3

Figure 3.3: Elevation 2

Figure: Elevation 3

3.3 Results and Discussions

3.3.1 Achievements:

The participants successfully completed the Basic House Floor Plan project, demonstrating a grasp of foundational AutoCAD skills. They were able to create a clear and accurate floor plan, incorporating design principles and considering functionality.

3.3.2 Challenges:

Common challenges included understanding the intricacies of scaling, accurately placing doors and windows, and coordinating furniture arrangements. These challenges were addressed through a combination of guided tutorials and practical exercises.

Chapter 4

Conclusion

Introduction

In conclusion, the Basic House Floor Plan project serves as a solid introduction to architectural drafting in AutoCAD, laying the foundation for participants to explore more intricate design concepts in the future.

Scope of Future Work

To further build on this project, future considerations may include more complex floor plans, additional architectural elements, and the introduction of 3D modeling concepts. This would allow participants to progress from basic to more advanced levels of architectural design using AutoCAD.
